

Jaros Technologies Corporation announces its Support for Oracle E-Business Suite Release 12

GRANITE CITY, IL—May 12, 2009—Jaros Technologies, a leading provider of packaged Business Performance and Intelligence Solutions, is announcing its support for Oracle E-Business Suite Release 12.

As organizations move to Release 12 they need a reporting solution which further supports that decision. Jaros' Solution provides enhanced upgrade protection as you progress to Release 12. This saves your company time and money because Jaros' data model remains unchanged.

“Through our customers experiences, who have built custom reporting solutions, when moving from Oracle E-Business Suite Version 10 to 11 or Version 11 to 12 they have had to rebuild the solution to accommodate the changes. Since Jaros' data model is consistent between Version 11 and 12, and all reports continue to run, the longevity of the Jaros solution provides a sound investment versus a views based approach,” said Kirk Wilson, Director of Software Engineering, of Jaros Technologies.

About Jaros Technologies Corporation

Jaros provides software, using industry proven technology, which supplies timely information, integrates with multiple data sources, has secure data, is front-end agnostic, and is easy to restart and administer. The fully defined solution's Operational Data Store obtains operational information quickly and its Data Marts provide information for complex business needs. Jaros allows you to solve tough information challenges with industry specific content and complex information made simple. With shorter implementation cycles and decision support solutions needed to adapt to business decision timeframes, rapid and accurate decision making is possible. Jaros Analytics for Oracle E-Business Suite is Jaros' flagship product and is installed in Fortune 50 and 500 companies worldwide. Visit www.jarostech.com to learn more.
